SUMMARY

Computer Science graduate who builds, documents, and hands off end-to-end automation systems. Delivered an AI-assisted billing service on n8n with a Telegram chatbot interface and a Google Gemini vision integration, scoped directly with the operator and backed by roughly 1,700 lines of specifications, runbooks, and operating procedures. Comfortable owning delivery end-to-end, learning unfamiliar tools quickly, and working directly with non-technical stakeholders.

TECHNICAL SKILLS

AI & Automation: n8n workflow automation, AI/LLM API integration (Google Gemini), chatbot development (Telegram Bot API), OCR and document processing, webhook and scheduled job orchestration, human-in-the-loop review pipelines

Documentation & Process: SOP and runbook authoring, technical specifications, decision logs, handoff documentation, requirements gathering, stakeholder consultation

Google Workspace & Tools: Google Sheets, Gmail API, Google Drive, Azure TFS, Git/GitHub, Docker, Vercel

Development: SQL/PostgreSQL, MySQL, TypeScript, JavaScript, Java, React, Next.js, Spring, REST APIs

PROFESSIONAL EXPERIENCE

Developer Intern, Alliance Software Inc.

June 2025–September 2025

- Delivered a table settings feature end-to-end for an Enterprise Resource Planning (ERP) system — requirement refinement through database procedures, API endpoints, and user interface — confirming scope with project leads and QA before release.
- Diagnosed and resolved high-impact bugs across the full application stack, tracing issues such as display inconsistencies and data type mismatches to root cause and verifying each fix against documented business rules.
- Worked inside an enterprise delivery workflow, tracking work items and feature branches in Azure TFS and reporting progress daily in Scrum-style meetings with project leads and QA.

Student Council Board Member, Head of Information Committee

September 2023–May 2024

- Owned official communications for a 9,000+ member student body, keeping announcements and event information accurate, consistent, and published on schedule across every channel.
- Coordinated with committee heads to standardize messaging between departments, and produced posters, announcements, and formal memoranda distributed university-wide.

PROJECTS

RentFlow — AI-Assisted Billing Automation System, Personal Project

July 2026–Present

- Built an end-to-end billing automation service for a 23-unit property, replacing a manual monthly process of reading 46 meters and computing 22 invoices by hand; the operator drives the full cycle from a Telegram chatbot backed by five n8n workflows.
- Integrated a Google Gemini vision model to turn handwritten meter sheets into structured data, staging every result for human review so no machine-read value reaches an invoice unverified.
- Redesigned an earlier 20-workflow, 422-node n8n build into 5 workflows and 43 nodes — a ~90% reduction that made the service far easier to troubleshoot, modify, and hand over.
- Automated invoice delivery over Gmail with per-recipient send tracking, and migrated the operator's Google Sheets records into a structured database, surfacing four data errors including a ₱1,569.78 under-billing.
- Authored roughly 1,700 lines of delivery documentation — specification, build guide, decision log, operating runbook, and handoff notes — and validated the service against a full month of hand-computed invoices, matching 21 of 22 to the centavo.

University Human Ethics Review Board System, VSU

May 2026

- Delivered a full-stack web application replacing Visayas State University's paper-based Research Ethics Review Board process with a centralized digital platform supporting 4 user roles and 3 review workflows.
- Ran the engagement end-to-end with university stakeholders — mapping the existing procedure, agreeing on a redesigned workflow, and iterating through revision cycles to final delivery, eliminating campus-wide hand delivery of printed protocol documents.
- Evaluated by 20 university stakeholders under the ISO/IEC 25010 quality model, scoring 4.97/5 Performance Efficiency, 4.89/5 Functional Suitability, and 4.82/5 Usability.

University Attendance Management System

August 2023

- Secured 12 of 12 Student Council votes for a system proposal, then owned the rollout — establishing data privacy policies with the University's Legal Office and serving as Information Security Officer and Data Controller under National Privacy Commission (NPC) guidelines.
- Ran system operations during high-traffic university events and handled 50+ incoming data requests, processing and distributing each as a formatted PDF report.

EDUCATION

Visayas State University, Baybay City

Graduated 2026

Bachelor of Science in Computer Science

AWARDS

- PSITE Eastern Visayas Coding Olympics Champion — 'C' Category (2024) and 'Java' Category (2023)
- 2nd Place, Computer Science Week Programming Competition (2023)
